# Dam Debris Removal

Structure Maintenance – Debris Removal

**Project Location:** Cave Creek, Arizona

In depths over 115 feet, utilizing surface supplied hard hat commercial dive gear, Underwater Engineering Services, Inc. (UESI) removed over 90 yards of debris off the intake bulkhead access slot. A video inspection of the intake trashracks was completed. A deep dive system with a decompression chamber and the floating work platform were deployed from Florida to Arizona where the sectional barges were assembled. A crane and several 30-yard dumpsters were loaded on the barge and utilized for the work.

Completion Date: January 2010  
UESI Job Number: COM2009261
