Nuclear Diving Services – Radiologically Contaminated Diving

UESI has performed nuclear contaminated dive projects throughout the United States, Japan, Korea and Taiwan since 1984. Projects have been conducted in Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR) commercial nuclear power facilities and also specialty nuclear fuel storage and / or testing facilities. Diving services and inspection, condition assessments, cleaning, repairs and retrofits are a common service contaminated nuclear safety-related & important to safety classified tank inspections. UESI has performed nuclear facility safety & non-safety related water storage tanks diving services for most of the Boiling Water Reactor (BWR) facilities (Condensate Storage Tanks, Fire Water Storage Tanks, etc.) in the United States. UESI has provided tank inspections, including inspection of Refueling Water Storage Tanks (RWI), and other diving services at Nuclear Plants.
