

Water Tank Cleaning and Inspection

Cleaning / Inspection

Project Location: Vero Beach, Florida

UESI completed cleaning and inspection of five above ground concrete water storage tanks. The project included the cleaning of accumulated bottom sediment, removal of any debris, pressure washing of all interior and exterior tank surfaces, and inspection of interior and exterior surfaces. The water tanks were taken off-line and drained during this process. Prior to returning them to service, the tanks were disinfected by UESI. The client utilized the reported inspection findings for documentation of the routine preventive maintenance of the storage tanks for regulatory compliance.

Completion Date: May 2013
