

Energy Northwest Columbia Station

Nuclear Diving Services - Outside Plant Inspections & Maintenance

Client/Owner:

Energy Northwest

Project Location:

Columbia Station Nuclear Power Plant

Project Services:

Nuclear Diving Services – Outside Plant Inspections & Maintenance

UESI has been providing numerous nuclear diving services for Energy Northwest (formerly Washington Public Power Supply Service) since 1992. UESI has performed many nuclear service water, plant intake inspections & maintenance, Condensate Storage Tank maintenance & inspection, nuclear ASME Section XI Code nondestructive examinations (IWE & IWL inside plant in immersion primary containment systems) and IWF component support inspections in the Facility Cooling Spray Pond (photo insert right) at Columbia Station. Outside plant diving service work has been performed simultaneously with inside radiologically contaminated, nuclear safety related diving services such as Suppression Pool cleaning, inspections, maintenance, repairs; Reactor steam dryer repairs (e.g. underwater welding, crack mitigation) and underwater plant modifications (e.g. ECCS strainer replacements, etc.).
