Remote area concrete placement
Anti Washout concrete placement

Marine Construction - In water, remote area and anti-washout concrete placement

Client/Owner: Various

Project Location: Various

UESI has completed numerous projects involving the placement of concrete underwater requiring use of tremie method, use of anti-washout materials and producing high quality concrete in remote areas not accessible by ready mix trucks. The above photo was taken during placement of 110 yards of anti-washout concrete offshore of Key Largo during a reef restoration project to the Molasses Reef.

UESI owns various size and types of concrete and grout mixers as well as various vessels and barges to support a wide range of in-water concrete placement projects.
