Offshore Pipe Removal

Client/Owner: The Vance Construction Co., Inc.

Project Location: Freeport, Bahamas

UESI provided marine support and deep water certified commercial dive crews to perform the cleaning and removal of eight pipelines that ranged from 24" to 48" in diameter and each line up to 1,200 feet in length. The coated steel oil lines were flushed, burned and cut into sections, rigged and removed from the water, and disposed per the plans and specifications. The lines fed an offshore platform that was damaged in a storm.

Completion Date: November 2010
